

Environmental Policy Statement

Renewable Oil Services (ROS) is committed to integrating effective environmental management into all aspects of its activities, both within office locations and across all onshore and offshore wind farm operations.

The core business of the Company is to provide fluid exchange services to the renewable energy industry, supporting the wider objective of reducing carbon emissions and contributing to national and international CO₂ reduction targets.

In support of the prevention of pollution and environmental protection, ROS maintains a documented Environmental Management System, aligned with ISO 14001, which aims to:

- Apply Best Available Techniques Not Entailing Excessive Cost (BATNEEC) where practicable.
- Support sustainable development through responsible use of resources and waste minimisation.
- Maintain effective arrangements for responding to environmental incidents and emergency situations.
- Comply with all applicable environmental legislation, regulations, and other relevant requirements.
- Monitor and remain up to date with changes in environmental legislation and guidance.
- Promote environmental awareness through education, communication, and engagement with employees and relevant stakeholders.

ROS recognises that environmental conditions, including climate change, weather patterns, and resource availability, may influence operational resilience and environmental performance. The company will consider these factors in business planning, risk management, and operational decision-making to support sustainable operations and long-term environmental protection.

ROS is committed to integrating effective environmental management into all aspects of its activities, both within office locations and across all onshore and offshore wind farm operations
